CURRENT WEBSITE AUDIT

Where the current site falls short, and what we're doing about it.

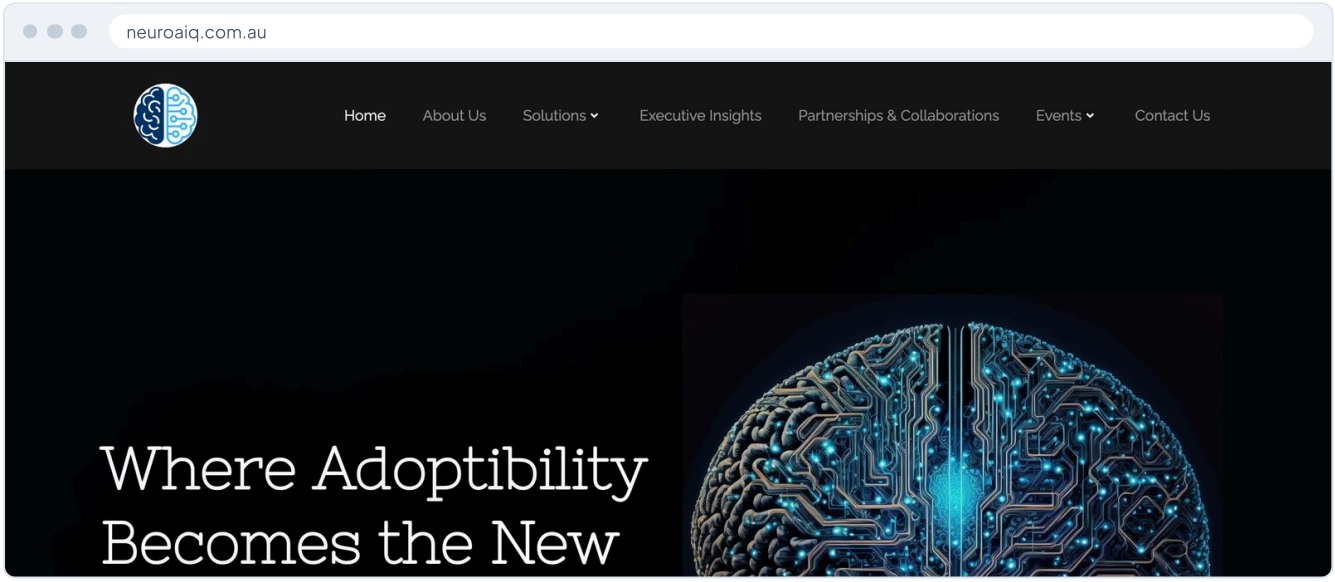

A full review of neuroaiq.com.au as it stands today — what's broken, what's holding it back, what has already improved since our August review, and exactly where each problem gets fixed.

PREPARED FOR
NeuroAIQ Pty Ltd

PREPARED BY
Team B58
La Trobe University

DATE
29 September 2026

VERSION
1.0 — for review

1 The short version

The site has good material on it — twelve articles and a detailed DRIVE™ page. The problem is everything around that material. **Four numbers sum it up:**

4
empty pages still published and linked from the menu or footer

3
broken links in the footer of every page on the site

7.4s
before the main content appears on a phone

0
phone numbers anywhere on the site — and no way to book a time

2 What we found, at a glance

Eight areas, each covered in detail in the pages that follow. The last column says where the fix lives — in the rebuilt site itself, or in the security plan and SEO strategy delivered alongside this report.

AREA	WHAT'S WRONG, IN A LINE	SEVERITY	FIXED BY
Getting in touch	The form now works, but the page's main button loops back to itself; no phone or booking route	HIGH	The rebuild
Message and credibility	A misspelt headline, and the founder missing from the homepage and About page	HIGH	The rebuild
Empty and broken pages	4 empty pages, 4 broken links, a duplicated page and an old homepage still live	HIGH	The rebuild, with redirects
Search visibility	Google introduces the site as "Home"; two SEO plugins compete	HIGH	SEO strategy
Measurement	No Google Analytics or Search Console; HubSpot records visits, but it's unclear anyone reviews them	MEDIUM	SEO strategy, Part 6
Speed on a phone	Main content takes 7.4 seconds to appear on mobile	MEDIUM	The rebuild, Cloudflare
Accessibility	Low-contrast text, unlabelled links, images without descriptions	MEDIUM	The rebuild
Security	Email spoofing isn't blocked; standard browser protections are missing	MEDIUM	Security plan

WHAT'S IMPROVED SINCE AUGUST

Four things have changed on the live site since the team's review on 3 August:

- The Contact page now has an enquiry form
- The broken "Contact us today" button now reaches the Contact page
- The old © 2019 notice is hidden from view
- The founder is now named on two pages

WHAT HASN'T

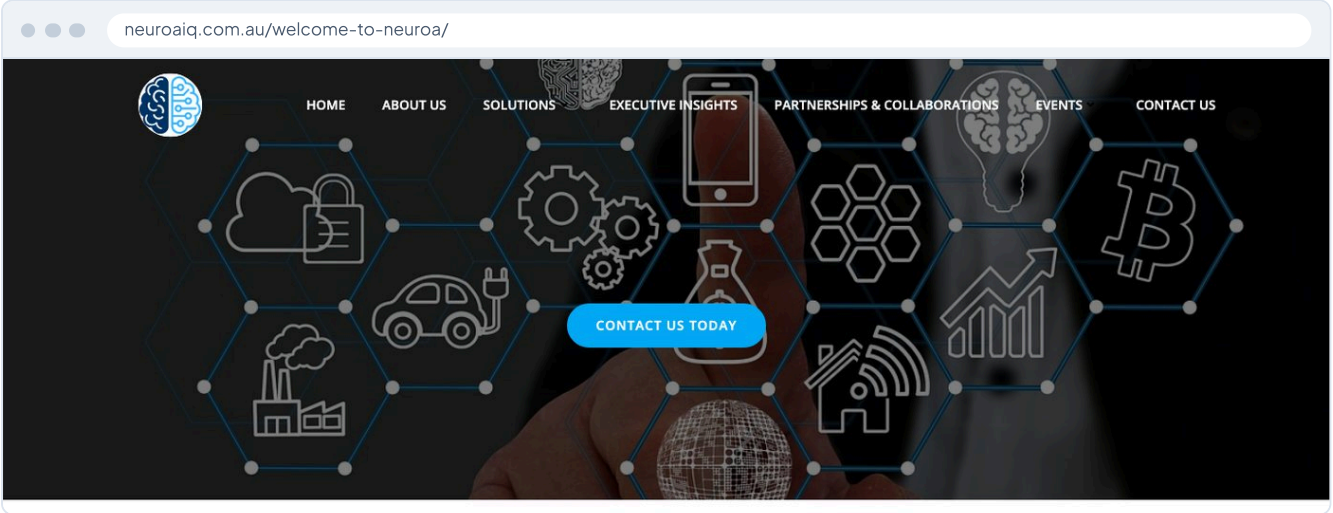

The misspelt headline reported in August is still live, and the number of empty pages has **grown from two to four.** Whether the site produces enquiries still can't be seen from outside — HubSpot is the one place that data may already sit.

Severity reflects the effect on enquiries and credibility, not how hard the fix is.

3 How we checked

Five sources, each used for what it's good at. **Where a finding from August has changed, this report says so** rather than repeating it.

AUGUST REVIEW **The team's original findings**	The problem statement in the Project Brief (v1.3, 3 August 2026) — the starting point for this report.
EVERY PAGE, RE-CHECKED **All 27 published pages**	Each page in the site's sitemap opened in a real browser on 28 September, with every internal link followed to see where it actually leads.
GOOGLE'S OWN TEST **PageSpeed Insights**	Google's Lighthouse test (version 13.5), run on the homepage for both mobile and desktop — the same scoring Google publishes.
PUBLIC SETTINGS **Headers and DNS**	The security settings and email records any browser or mail server can see.
THE REBUILD **Prototype V3**	Checked issue by issue, so this report only says something is fixed in the rebuild where the design actually fixes it.

WHAT WE DIDN'T DO

No login or admin access, no testing against the site, and no access to the visit data HubSpot collects. **Some things can't be seen from outside**, such as where form enquiries end up. Those are listed as questions, not guessed.

SEVERITY

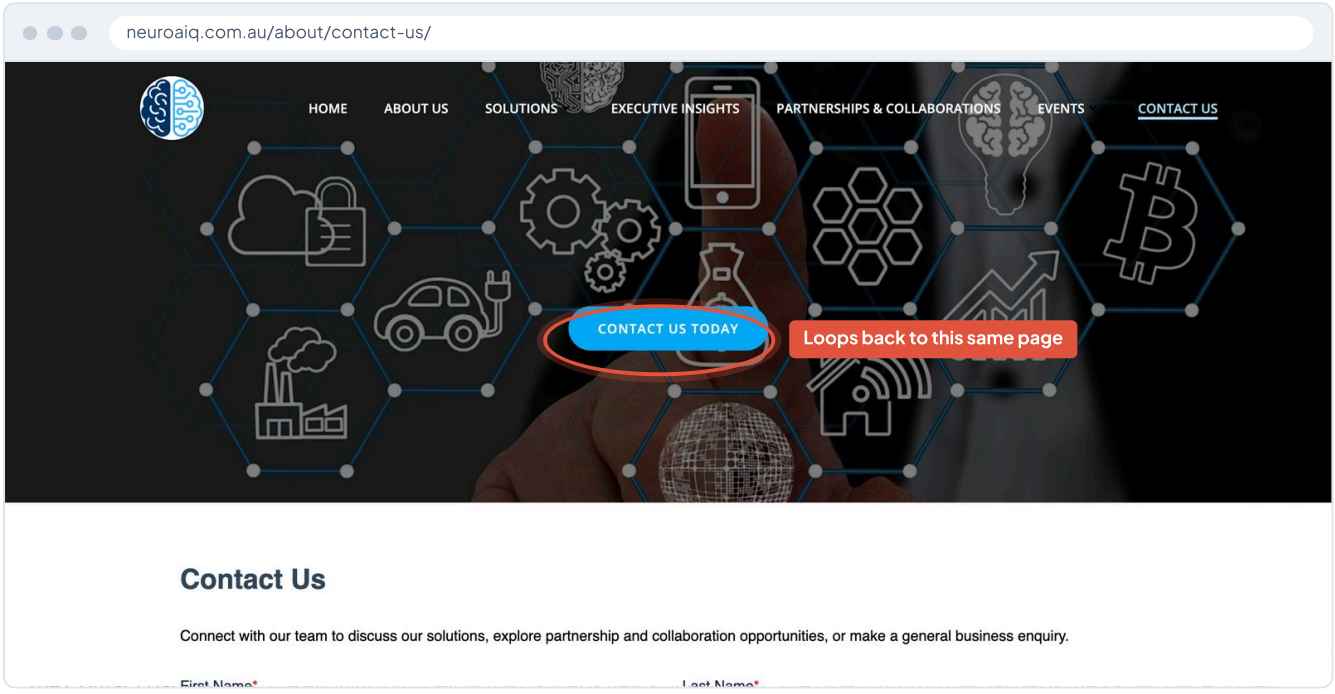

High — stops enquiries or undermines credibility now.
Medium — costs visitors or rankings over time.
It reflects the effect on the business, not how hard the fix is.

01

AREA ONE · HIGH

Getting in touch

The site's first job is turning interest into an enquiry. In August, the path to an enquiry was broken. It's partly working now.

FINDING	WHAT WE FOUND ON 28 SEPTEMBER	SINCE AUGUST
Enquiry form	A form now sits on the Contact page, loaded by a script after the page opens.	IMPROVED
"Contact us today" button	Links to `/ecliptica/contact-us/` — an address left by the website theme's demo — which now redirects to the Contact page. **On the Contact page itself, it just reloads the page.**	PARTLY
Phone number	None anywhere on the site.	UNCHANGED
Booking a conversation	No way to book a time directly — every route leads to the same form.	UNCHANGED
Where enquiries go	Can't be seen from outside. HubSpot is installed, but whether the form feeds it isn't visible.	TO CONFIRM

HOW IT'S FIXED

The rebuild gives every page a working route to an enquiry — the design already includes:

- An enquiry form, a published phone number, and a clear call to book a conversation
- The AI Adoption Readiness Self-Check, as a lighter first step for people not ready to talk
- Spam protection and a clear home for every enquiry — security plan, Step 5

PROJECT OBJECTIVE O1 · WORKING CONVERSION PATH

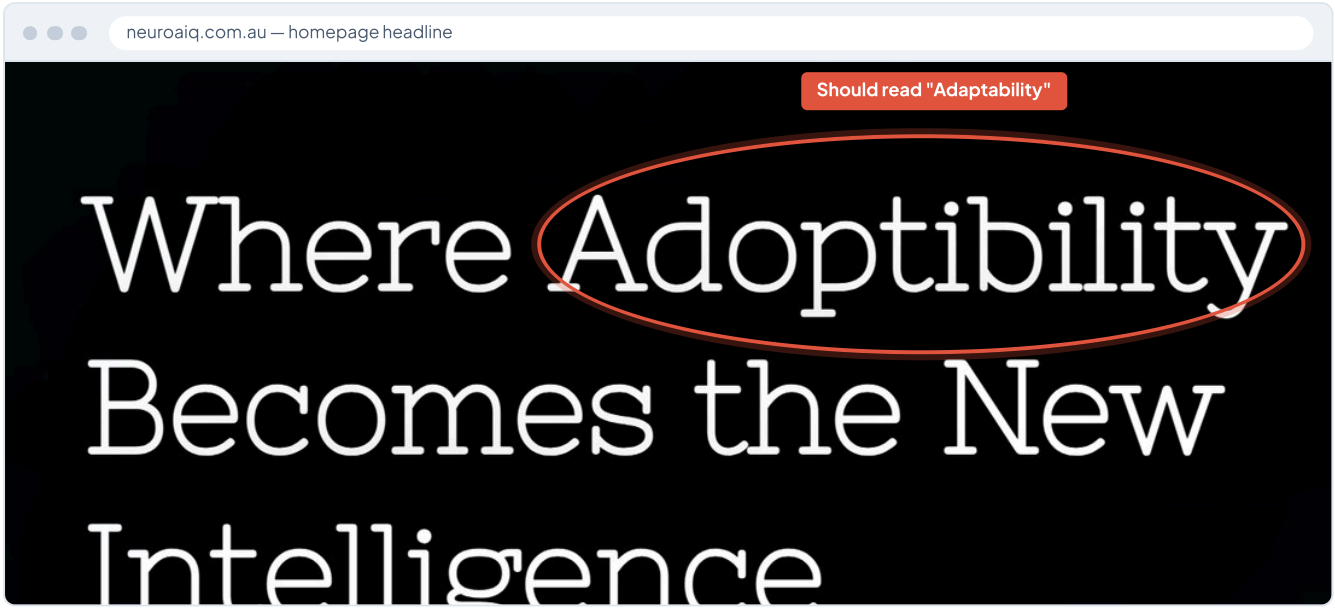

"Ecliptica" is the name of the WordPress theme the site was built on; the address is left over from its demo content.

02

AREA TWO · HIGH

Message and credibility

A leader should understand in ten seconds what NeuroAIQ does and why to trust it. Today the largest text on the site has a spelling error, and the person behind the business is hard to find.

THE HEADLINE

Abstract, and misspelt

Beyond the spelling, the headline doesn't say what NeuroAIQ does or who it's for. The homepage also carries **two main headings competing for the same role**, which confuses both readers and search engines.

THE FOUNDER

Named — but not where buyers look

The founder now appears on the Workforce Readiness page and as the author of one article. She still isn't on the homepage or the About page, which is **where a buyer checks who they'd be dealing with.**

ABOUT PAGE

Around 130 words, no heading

The page that should build the most trust is one of the thinnest on the site, with no main heading and no people, credentials or proof points on it.

INNER PAGES

A generic banner on inner pages

The same stock technology banner heads the inner pages — including a Bitcoin symbol, a car and a factory. None of it relates to NeuroAIQ.

HOW IT'S FIXED

The rebuild's homepage opens with the tagline spelt correctly — "Where Adaptability Is the New Intelligence" — then says plainly what NeuroAIQ does: "We deliver the missing bridge between innovation and human adaptability, so leaders act on evidence rather than assumption." A "Book a consultation" button sits directly beneath.

- One main heading per page
- A founder and team section, with credentials, on the pages buyers check
- The three-week DRIVE™ proposition and the LEAD™ chain explained visually

OBJECTIVES O2 · CREDIBLE PUBLIC FACE · O3 · UNDERSTOOD IN TEN SECONDS

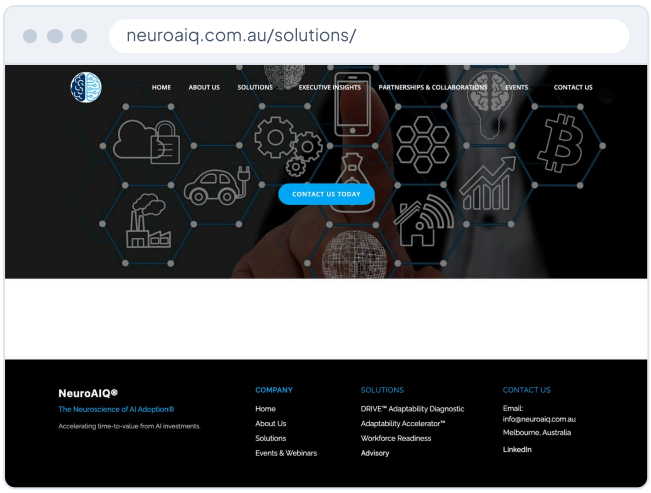

Wording quoted from the rebuild prototype (V3). Final wording is subject to NeuroAIQ's approval.

03

AREA THREE · HIGH

Empty, broken and leftover pages

Two generations of the site are still running side by side. For a visitor, that shows up as pages with nothing on them and links that go nowhere.

PROBLEM	WHERE IT IS	EFFECT
Empty pages	Advisory, Solutions, Upcoming Events, Past Events — up from two in August	Dead ends in the menu and footer
Broken footer links	About Us, Adaptability Accelerator™, Events & Webinars — page not found	Broken on all 27 pages
Broken article link	An old address for one of the articles, still linked from four other pages	Readers hit a dead end
DRIVE™ published twice	Once as a page, once as an article, with different headlines	Competes with itself in search
An old homepage, still live	"Welcome to NeuroA" — a previous homepage, still listed for search engines	Duplicate, outdated content
Theme demo address	The `/ecliptica/` link, on 26 of 27 pages	Relies on a redirect to work
Leftover addresses	An "events-2" section, and WordPress's default "Uncategorized" category listed for search	Untidy, and indexed
© 2019 notice	Hidden from view since August, but still in the code of 26 of 27 pages	Low — now invisible

HOW IT'S FIXED

The rebuild replaces the whole site, so every empty, duplicate and leftover page goes at once. Every old address that's worth keeping gets a redirect to its new page — so existing links and search rankings aren't lost (SEO strategy, Part 1).

OBJECTIVE O4 · RETIRE THE LEGACY SITE ENTIRELY

All 35 internal links across the site were followed on 28 September; 4 return "page not found".

04

AREA FOUR · HIGH

Search visibility

Covered in full in the SEO strategy. In short: the site tells search engines very little about what it does.

FINDING	DETAIL
Page titles	The homepage is titled "Home - neuroaiq.com.au", and all 27 titles end in the web address rather than the brand
Search descriptions	The homepage's is assembled automatically from page text, including fragments like "just3 weeks"
Two SEO plugins	Yoast SEO and All in One SEO are both active and both writing to the page
Main headings	Missing on 9 of the 14 non-article pages; the homepage has two
Structured data	Basic organisation details only — nothing on the founder or the solutions

WHY GOOGLE'S SCORE SAYS 100

Google's Lighthouse test gives the homepage a perfect 100 for SEO. That score only checks that the basics exist — a title, a description, a crawlable page. **It can't tell that the title says "Home."** The technical boxes are ticked; what's in them is the problem.

05

AREA FIVE · MEDIUM

Measurement

The site has no Google data at all, and the visit data it does collect sits in HubSpot, out of view.

GOOGLE ANALYTICS

Not installed

No Google Analytics, Tag Manager or Search Console on any of the 27 pages — so no Google data on searches, sources or behaviour.

REAL-USER DATA

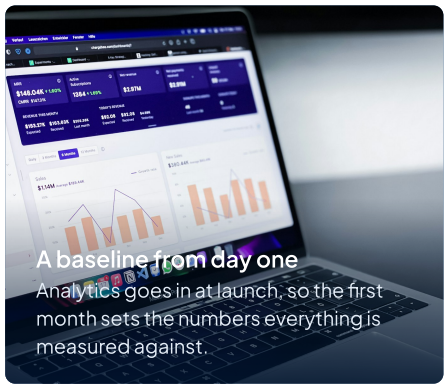

Too little traffic for Google

Google's speed report shows "No Data" from real visitors — not enough traffic for Google to measure.

HUBSPOT

Tracking, out of view

HubSpot's tracking code runs on every page and records visits. **Whether anyone reviews it, or the form feeds it, can't be seen from outside.**

A baseline from day one

Analytics goes in at launch, so the first month sets the numbers everything is measured against.

HOW BOTH ARE FIXED

The SEO strategy covers both — written titles and descriptions, one SEO tool, structured data (Parts 1 and 4), and Google Analytics, Search Console and Bing installed at launch, alongside HubSpot (Part 6).

OBJECTIVE O5 · IMPROVE DISCOVERABILITY

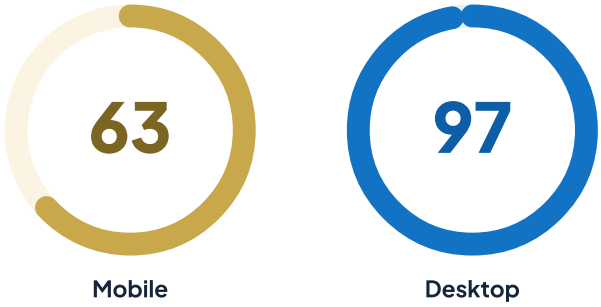

Lighthouse's SEO category checks technical basics only; Google says ranking depends on many factors it doesn't score.

06

AREA SIX · MEDIUM

Speed on a phone

On a desktop the site is fast. On a phone it's slow — and **Google uses the mobile version of a site for ranking.**

Google Lighthouse performance score

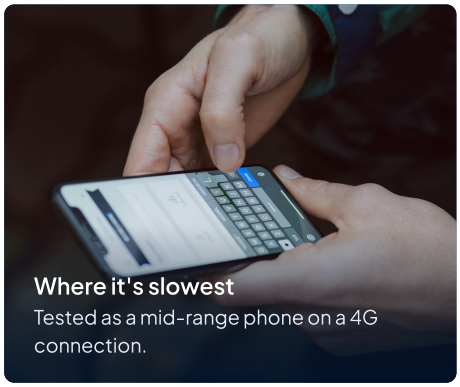

Scored out of 100. Google treats 90 and above as good, 50–89 as needing work, and below 50 as poor.

Same homepage, same day — only the device changes.

MEASURE	MOBILE	DESKTOP	GOOGLE'S "GOOD" LEVEL
Main content appears (LCP)	7.4 s	1.1 s	2.5 s or less
Anything appears (FCP)	4.7 s	0.9 s	1.8 s or less
Page visibly complete (Speed Index)	5.6 s	1.1 s	3.4 s or less
Layout stays still (CLS)	0	0.004	0.1 or less
Server starts responding	about 0.9 s		0.8 s or less

What's slowing it down, from Google's own diagnosis of the mobile page:

- **Files that block the page from showing** — up to about 2 seconds of delay on their own
- **Images larger than they need to be** — around 198 KB could be saved
- **Files that aren't cached**, so they reload on every visit — about 143 KB
- **Code the page never uses** — about 113 KB of styles and scripts

HOW IT'S FIXED

The rebuild is designed to be much lighter — no page builder or unused plugin code, and compressed images. Cloudflare then caches it close to visitors (security plan, Step 3), and the targets above become launch requirements (SEO strategy, Part 1).

Lighthouse 13.5 via PageSpeed Insights, 28 September 2026. Mobile emulates a mid-range phone on slow 4G.

07

AREA SEVEN · MEDIUM

Accessibility

Google's test scores accessibility at 89 on both mobile and desktop. The gaps are specific and fixable — and several also affect how well AI tools can read the site.

FINDING	WHAT IT MEANS FOR A VISITOR
Low-contrast text	Some text doesn't stand out enough from its background to read comfortably
Links without names	Screen readers announce some links — including the mobile menu button — with nothing to say what they do
Images without descriptions	80% of images across the site have none — mostly the logo, repeated four times on every page
Heading order	Headings skip levels, which makes pages harder to navigate by keyboard or screen reader
No main landmark	Assistive technology can't jump straight to a page's main content

Google's newer "agentic browsing" check scores the homepage 2 out of 3, noting its structure isn't well formed for AI agents — the same underlying issues, seen from an AI tool's side.

HOW IT'S FIXED

The rebuild is designed to meet WCAG 2.1 AA — text contrast checked against the standard, every link and button labelled, one main heading per page, and every meaningful image described.

08

AREA EIGHT · MEDIUM

Security

Covered in full in the security plan. Google's test independently flagged the same missing protections we found.

FINDING	DETAIL	SECURITY PLAN
Email spoofing	Fake emails from an @neuroaiq.com.au address aren't rejected	Step 4
Browser protections	No HSTS, an ineffective content policy, no clickjacking protection — also flagged by Google	Step 3
Version disclosure	The server names its PHP version; the page names its plugins	Step 3
No firewall or DNSSEC	Nothing filters traffic before it reaches the site	Step 3
Two SEO plugins	More code to keep patched than the site needs	Step 6

None of these means the site has been compromised. They're gaps in protection, most of them settings rather than rebuilds.

4 The fix plan, issue by issue

Every finding in this report, where it's fixed and where it stands. **Nothing on this list is left without a home.**

IMPROVED changed on the live site since August AT LAUNCH built into the rebuild

AFTER LAUNCH in the security plan or SEO strategy YOUR CALL needs a decision

ISSUE	THE FIX	WHERE	STATUS
No enquiry form	Form added to the Contact page	Live site	IMPROVED
Contact button loops	Every call to action goes to a real destination	Rebuild	AT LAUNCH
No phone or booking route	Phone number and a booking call to action on key pages	Rebuild	AT LAUNCH
Misspelt, abstract headline	Spelling corrected; a plain statement of what NeuroAIQ does	Rebuild	AT LAUNCH
Founder hard to find	Founder and team on the homepage and About page	Rebuild	AT LAUNCH
Empty and duplicate pages	Replaced by the new site structure	Rebuild	AT LAUNCH
Broken links	New links checked before launch; old addresses redirected	Rebuild, SEO Part 1	AT LAUNCH
Generic stock banner	Replaced by the new design	Rebuild	AT LAUNCH
Accessibility gaps	Designed to WCAG 2.1 AA, checked by hand	Rebuild	AT LAUNCH
Slow on mobile	A lighter site, cached by Cloudflare	Rebuild, Security Step 3	AT LAUNCH
Titles and descriptions	Written for every page	SEO Part 1	AT LAUNCH
No Google Analytics	Google Analytics, Search Console and Bing on day one, alongside HubSpot	SEO Part 6	AT LAUNCH
Browser protections	Security headers and Cloudflare in front of the site	Security Step 3	AFTER LAUNCH
Email spoofing	DMARC moved to "reject" over eight weeks	Security Step 4	AFTER LAUNCH
Structured data, AI search	Founder and solutions described for Google and AI tools	SEO Parts 4–5	AFTER LAUNCH
Two SEO plugins	One tool — or none needed, on static hosting	Security Step 6	YOUR CALL
Where enquiries go	Confirm whether HubSpot receives them	Security Step 5	YOUR CALL

"At launch" items are designed and built into the rebuild; they reach visitors when the new site goes live.

5 Where we stand against the project's objectives

The six objectives agreed in the Project Brief in August — each one written to answer a problem in this report.

#	OBJECTIVE	WHERE IT STANDS	STATUS
O1	A working conversion path	A form is live today; phone, booking and working buttons arrive with the rebuild	PART-WAY
O2	A credible public face	Founder and team designed into the rebuild; proof points depend on what can be published	AT LAUNCH
O3	Understood in ten seconds	The rebuilt homepage opens with a plain statement of what NeuroAIQ does; to be confirmed with five outside testers, as the brief set out	AT LAUNCH
O4	Retire the legacy site	The whole site is replaced, with a redirect for every old address worth keeping	AT LAUNCH
O5	Improve discoverability	Foundations at launch; content, authority and AI search over six months	LAUNCH + 6 MO
O6	A platform NeuroAIQ can maintain	Depends on the hosting decision — WordPress or static	YOUR CALL

6 What we need from you

Genuine gaps rather than assumptions. **The first two decide what happens at launch.**

#	QUESTION	WHY IT MATTERS
1	Is launch still planned for Friday 2 October, as the project timeline set out?	Everything marked "At launch" hangs on it
2	Will the rebuilt site stay on WordPress, or move to static hosting?	Decides objective O6 and the plugin fix
3	Do contact-form enquiries reach HubSpot — and does anyone review the visit data it already collects?	Confirms no enquiries are lost, and gives a baseline
4	Is the Adaptability Accelerator™ a current offer? Its footer link is broken	Decides whether it's rebuilt or removed
5	Can any client outcomes be published, even de-identified?	The strongest proof point available (O2)
6	Would you like the misspelt headline corrected on the live site before launch?	A five-minute fix, with hosting access

THE POINT OF ALL OF IT

The expertise is already on the site. The rebuild makes sure nothing around it gets in the way.
