SEO AND AI SEARCH STRATEGY

Being the answer, not just a result.

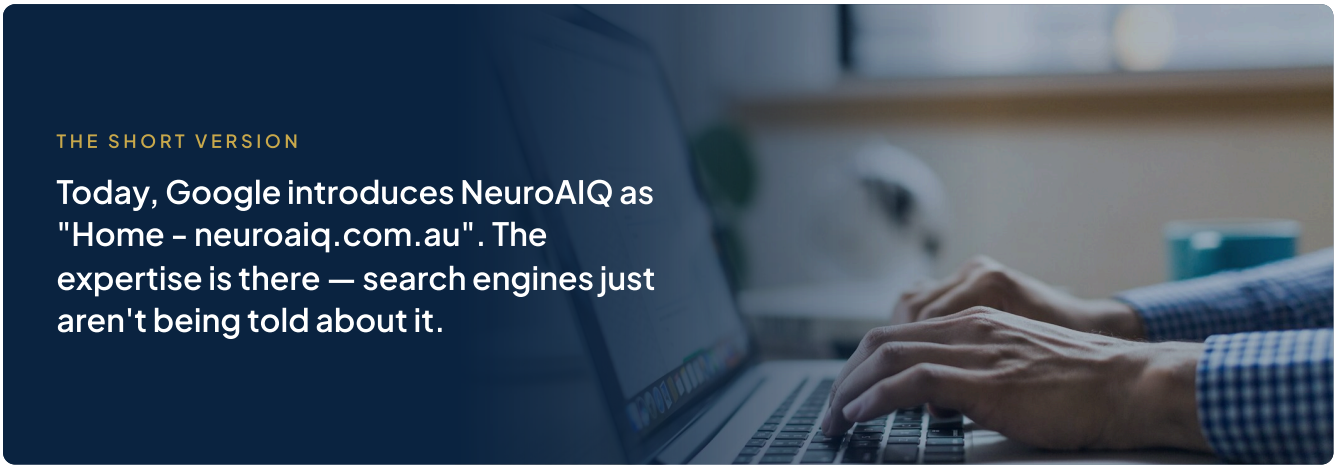

A plan to put NeuroAIQ in front of the leaders already looking for help with AI adoption — on Google, on Bing, and inside the AI assistants they increasingly ask first. It starts with what the current site tells search engines today, and builds from there.

PREPARED FOR
NeuroAIQ Pty Ltd

VERSION
1.0 — for review

THE SHORT VERSION

Today, Google introduces NeuroAIQ as "Home - neuroaiq.com.au". The expertise is there — search engines just aren't being told about it.

1 Why search matters for NeuroAIQ

The site's primary job is lead generation. For a firm selling to leaders who research before they reach out, **being findable is where lead generation starts.**

HOW BUYERS SHORTLIST

Leaders search before they call

Before an owner or executive books a conversation, they search — for the problem, for the approach, and for the firm. **If NeuroAIQ isn't in those results, it isn't on the shortlist.**

THE BUYER GUIDES

Missing from the guides buyers read

The team's competitor research found NeuroAIQ in none of the 2026 Australian AI consulting buyer guides reviewed. Those guides rank well and get read at shortlist stage — **which is exactly when a buyer decides who to call.**

AI ASSISTANTS

More research now starts with an AI

A growing share of questions go to ChatGPT, Claude, Gemini or Copilot instead of a search box. Those tools answer from what they can find and trust — **so being findable now also means being quotable.**

Based on public checks of neuroaiq.com.au on 28 September 2026 and the team's competitor research.

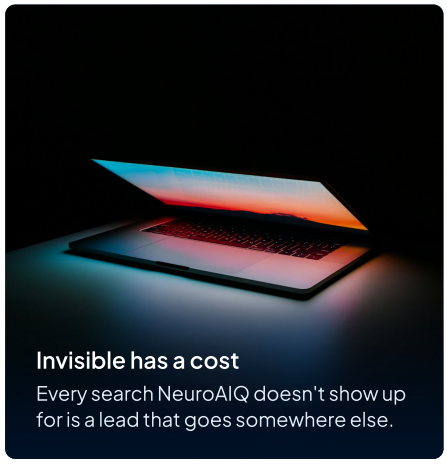

2 Where things stand today

We checked the live site on 28 September 2026 — the homepage, and the files search engines read to understand it. Most of what's wrong is **fixable in the rebuild at no extra cost.**

CHECK	WHAT WE FOUND	STATUS
Page title in results	"Home - neuroaiq.com.au" — **says nothing about what NeuroAIQ does**	FIX FIRST
Result description	Appears to be pulled automatically from page text, with fragments like "just3 weeks" and "Explore Our Approach ↓"	FIX FIRST
SEO plugins	Yoast SEO and All in One SEO are both active and both writing to the page	FIX FIRST
Google Analytics	No Google Analytics on the site — **no Google data on searches or visitors to start from**	FIX AT LAUNCH
Search Console, Bing	No verification tag on the homepage — may be verified another way	CONFIRM
LinkedIn share preview	Also shows "Home - neuroaiq.com.au" — and it's set twice	FIX AT LAUNCH
Structured data	Basic organisation details only — nothing on the founder, the solutions or DRIVE™	IMPROVE
AI guidance file	An `llms.txt` exists, auto-generated — it lists posts, not what NeuroAIQ does	IMPROVE
Sitemaps	Three sitemap addresses listed, left over from two SEO plugins	TIDY
Page structure	Two main headings on the homepage; 2 of 3 images have no description	TIDY
Access for crawlers	Search engines and AI crawlers are all allowed in; missing pages return a proper 404	IN PLACE
HubSpot	Tracking is installed, so leads can already be traced once forms connect to it	IN PLACE

THE ONE TO FIX FIRST

The page title. It's the blue headline in every Google result, the tab name in a visitor's browser, and the headline on every LinkedIn share of the site. Right now it reads "Home" — the one word that tells a searcher nothing. It's a five-minute change, and it's **the single most visible thing in this report.**

Invisible has a cost

Every search NeuroAIQ doesn't show up for is a lead that goes somewhere else.

Checks: homepage HTML, robots.txt, sitemaps and llms.txt. Search Console access would confirm the rest.

3 What a searcher sees

The same site, described two ways. The second one is written to answer the question a leader is actually asking — and to give them a reason to click.

AFTER THE REBUILD

NeuroAIQ
https://neuroaiq.com.au

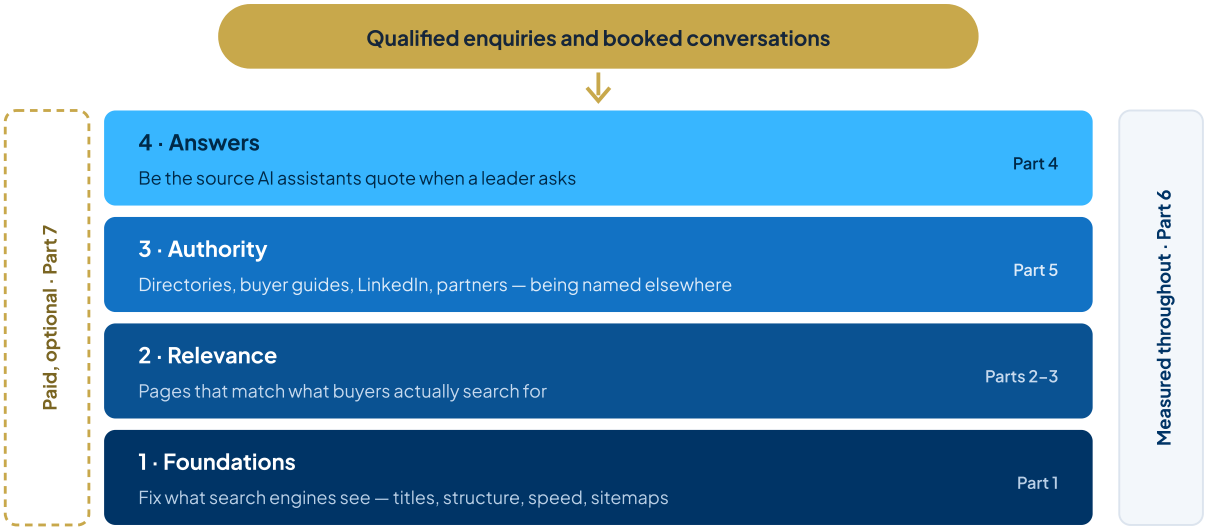

AI Adoption Diagnostic for Leaders | NeuroAIQ

Find out why your AI investment isn't delivering. The DRIVE™ Adaptability Diagnostic gives leaders an evidence-based roadmap in three weeks.

Illustration only. Search engines choose how to display a result, but they start from the title and description the site provides.

4 The strategy on a page

Four layers, each built on the one beneath it — measured throughout, with paid advertising as an optional accelerator rather than a foundation.

Built from the bottom up — each layer depends on the one below it working.

WHERE TO COMPETE

Broad terms like "AI consulting" are dominated by global firms, and competing there is slow and expensive. The opportunity is in **the specific questions a leader asks when AI isn't returning value** — specific enough to be far less contested than the broad terms, and asked by exactly the right people.

01

PART ONE · AT LAUNCH

Foundations: fix what search engines see

The unglamorous work that everything else depends on. Nearly all of it happens once, as part of the rebuild.

- [ ] **One SEO tool, not two.** On WordPress, keep one plugin and remove the other. On static hosting, the rebuild handles it directly.
- [ ] **A written title and description for every page**, in NeuroAIQ's own words — never left to be generated.
- [ ] **One clean sitemap**, submitted to both Google Search Console and Bing Webmaster Tools.
- [ ] **A redirect for every old address**, so links and rankings the current site has built aren't lost at launch.
- [ ] **One main heading per page**, with the page's real subject in it.
- [ ] **Fast on a phone.** Pass Google's Core Web Vitals: loading under 2.5 seconds, responding in under 200 milliseconds, nothing jumping around as it loads.
- [ ] **Images compressed and described** — smaller files for speed, and a short description for screen readers and search.
- [ ] **A proper share image** at 1200 × 627 pixels, so LinkedIn posts of the site look deliberate.
- [ ] **One address for everything** — with or without `www`, always landing in the same place.

Proposed page titles. Each leads with what a buyer would search for and stays under 60 characters, so it isn't cut off in results. These follow the pages in the current prototype and will be adjusted to match the final sitemap.

PAGE	TITLE	WRITTEN FOR SOMEONE SEARCHING…
Home	AI Adoption Diagnostic for Leaders | NeuroAIQ	for a way to find out why AI isn't working
DRIVE™	DRIVE™ AI Adoption Diagnostic in 3 Weeks | NeuroAIQ	for an assessment, and how long it takes
Advisory	AI Adoption Advisory for Leadership Teams | NeuroAIQ	for ongoing help acting on evidence
Workforce Readiness	AI Workforce Readiness Programs | NeuroAIQ	for capability-building for staff
Self-Check	AI Adoption Readiness Self-Check | NeuroAIQ	for a quick way to gauge where they stand
About	About NeuroAIQ — The Neuroscience of AI Adoption	for who's behind the firm
Insights	AI Adoption Insights for Executives | NeuroAIQ	for answers to specific questions
Contact	Book a Discovery Conversation | NeuroAIQ	for the next step

PHONE FIRST

Google reads the mobile version of a site first — so that's the version these foundations are built for.

Core Web Vitals thresholds are Google's published "good" levels for LCP, INP and CLS.

02

PART TWO

What buyers actually search for

People don't search for "neuroscience-informed AI adoption". They search for the problem they've got. The plan is built around three stages a buyer moves through.

STAGE 1 · THE PROBLEM

They've noticed the problem

- why aren't staff using Copilot
- AI licences not being used
- AI investment not delivering ROI
- shadow AI risk in the workplace
- how to measure AI adoption

STAGE 2 · THE FIX

They're looking for an approach

- AI adoption assessment
- AI readiness assessment Australia
- AI adoption strategy for SMEs
- AI change management
- AI workforce readiness program

STAGE 3 · THE FIRM

They're choosing a firm

- AI adoption consultant Melbourne
- AI consulting for small business
- DRIVE diagnostic
- NeuroAIQ
- AI adoption firm Australia

WHERE THE VALUE IS

Stage 1 is the widest open

These are specific questions rather than broad industry terms, so there's far less competition for them — and they come from exactly the buyer NeuroAIQ wants: **someone who has already spent on AI and can't see the return.** That's where most of the content in Part 3 is aimed.

A CAREFUL ONE

"AI change management"

Buyers search this, but NeuroAIQ isn't a change-management firm and shouldn't read like one. We'd answer it with a page explaining **why adoption is a question of evidence rather than change** — capturing the search without taking on the positioning.

THE FREE ALTERNATIVE

Answer the SMEC AI question

Owners researching AI help will find SMEC AI, the free government-funded program. A plain comparison page — what the free option covers, and **what a diagnostic adds** — meets that question head-on rather than leaving it unanswered.

A NOTE ON NUMBERS

This map is built on buyer intent, not search volume data — we haven't used a paid keyword tool, and we won't guess figures. **Real volumes come from Google Keyword Planner and Search Console** in the first month after launch, and the priorities get adjusted to match.

Search phrases are illustrative examples of each stage, written the way people type them.

03

PART THREE

Content that earns the visit

Each page answers one question a buyer is asking, in plain language, with a clear next step. In priority order:

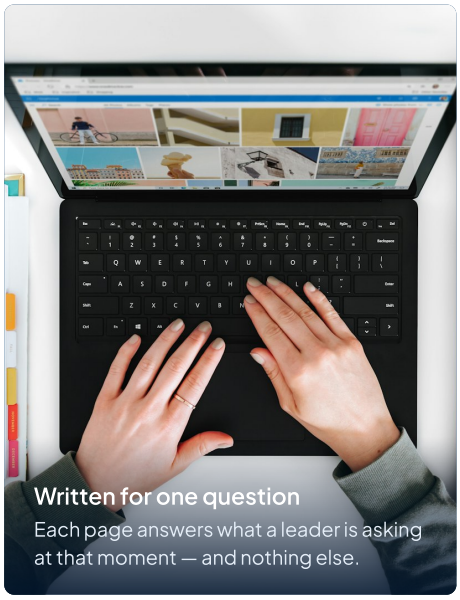

#	PAGE	WHY IT'S WORTH BUILDING	STAGE
1	DRIVE™ Diagnostic	The entry point to every engagement — it needs to be the strongest page on the site	2 and 3
2	How the three weeks work	"Three weeks" is the headline benefit. Showing each week makes it concrete and credible	2
3	The Self-Check	A useful tool people can share and come back to — and the natural offer for any ads	1 and 2
4	One page per problem	Unused licences, Shadow AI, training without adoption, renewals made blind — each its own page	1
5	The founder's page	Named expertise is one of the signals Google and AI tools look for before trusting advice	3
6	The LEAD™ framework	An original, named framework is the kind of thing AI assistants tend to cite	2
7	Common questions	Short, direct answers to what buyers ask — a format AI tools quote readily	1 to 3
8	A paid diagnostic or a free program?	Answers the SMEC AI question honestly, before a buyer asks it	3

A rhythm that's sustainable. Two articles a month is enough to build momentum without becoming a burden. Each one answers a single buyer question, draws on the founder's expertise, and ends with a link to the Self-Check or a conversation.

Write once, use three times. Every article becomes a LinkedIn post from the founder's profile and a section of the HubSpot newsletter — so one piece of thinking reaches search, LinkedIn and existing contacts.

EXISTING ARTICLES

The current site already has articles, such as **"Why organisational conditions matter more than the technology?"**. They should carry over to the new site, with a proper title and description and a redirect from their old address.

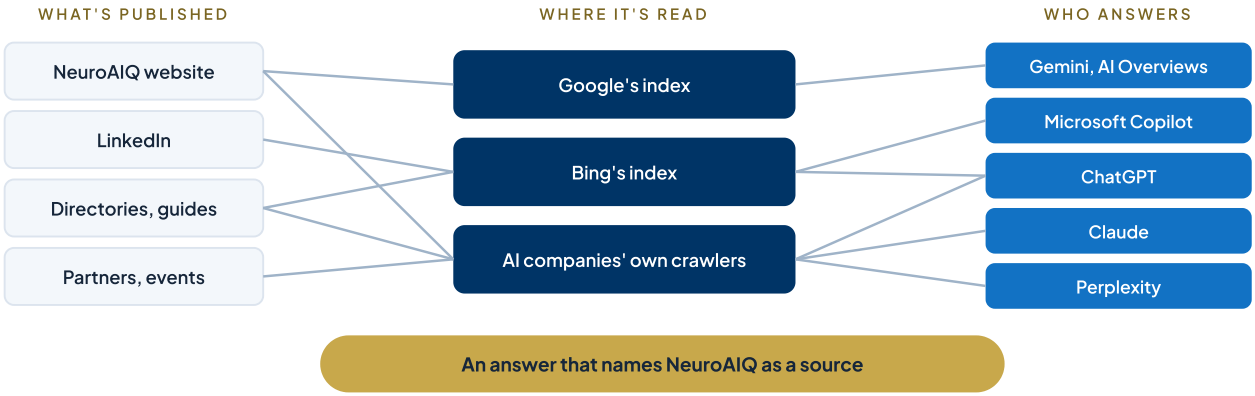

Written for one question

Each page answers what a leader is asking at that moment — and nothing else.

PART FOUR

04 Showing up in AI answers, not just Google

When a leader asks ChatGPT, Claude, Gemini or Copilot who can help with AI adoption, the tool doesn't show ten links. It gives an answer — and it names a few sources. The aim is for NeuroAIQ to be one of them.

Simplified. Each assistant draws on a different mix, and the mix changes — which is why the plan covers all three sources rather than betting on one.

BING, QUIETLY

Bing matters more than it used to

Microsoft Copilot answers from Bing; DuckDuckGo and Yahoo draw heavily on Bing's results; and ChatGPT's search has drawn on it too. **Bing Webmaster Tools takes ten minutes to set up** and it can import the site's setup straight from Google Search Console.

ANSWER FIRST

Put the answer at the top

AI tools tend to quote pages that answer a question directly in the first few lines, then explain. Every problem page opens with a one-paragraph answer a tool could lift as it is.

CONSISTENCY

Say the same thing everywhere

AI tools cross-check. If the website, LinkedIn, the Australian Government AI Directory and Google all describe NeuroAIQ the same way, **the tools are more likely to name it.** Mixed descriptions make them hedge.

NAMED EXPERTISE

Make the founder findable

A neuroscience-trained founder recognised through Australia's Global Talent program is a genuine credential — stated plainly on the site and linked to the founder's LinkedIn, it gives an AI tool a reason to trust the advice.

Measuring AI visibility. There's no Search Console for AI answers yet, so we measure it directly. Once a month, the same set of buyer questions goes to ChatGPT, Claude, Gemini, Copilot and Perplexity, and we record whether NeuroAIQ is named. Visits arriving from those tools are tracked separately in Google Analytics.

FROM THE MONTHLY QUESTION SET

- Why isn't our AI investment delivering value?
- How do I measure AI adoption across a business?
- Who helps Australian organisations with AI adoption?
- What is an AI adoption diagnostic?

4 Letting the right crawlers in

AI companies send separate crawlers for separate jobs. Some fetch pages to answer a question right now; others collect pages to train future models. **They can be allowed or blocked individually**, in the site's `robots.txt` file.

CRAWLER	COMPANY	WHAT IT'S FOR	RECOMMENDATION
Googlebot	Google	Search results and AI Overviews	ALLOW
Bingbot	Microsoft	Bing results and Copilot	ALLOW
OAI-SearchBot, ChatGPT-User	OpenAI	ChatGPT's search, and pages a user asks it to open	ALLOW
Claude-SearchBot, Claude-User	Anthropic	Claude's search, and pages a user asks it to open	ALLOW
PerplexityBot	Perplexity	Perplexity's answers	ALLOW
GPTBot, ClaudeBot, Google-Extended	Various	Training future AI models — not search	YOUR CALL

Today everything is allowed, which is the right starting point. Training crawlers are a genuine choice: allowing them helps future models know about NeuroAIQ; blocking them keeps the content out of training. **Blocking them doesn't affect search.**

WHERE THE TWO PLANS MEET

The security plan recommends putting the site behind **Cloudflare**, which can block AI crawlers by default on new sites. **If the site moves there, that setting has to be checked** — otherwise one plan quietly undoes the other, and AI tools may stop being able to read the site.

Structured data is a hidden label on each page that tells machines, in their own format, exactly what NeuroAIQ is, who founded it and what it offers. Today it covers the basics — the organisation and the website. The rebuild would add the founder and each of the three solutions, DRIVE™ among them.

A hand-written `llms.txt` replaces the auto-generated one — a plain-English summary of what NeuroAIQ does, for AI tools to read. It's an emerging convention rather than a confirmed standard, so we'd treat it as **cheap insurance, not a strategy.**

```
// structured data — simplified example
{
  "@type": "ProfessionalService",
  "name": "NeuroAIQ",
  "slogan": "The Neuroscience of AI Adoption",
  "areaServed": "Australia",
  "founder": {
    "@type": "Person",
    "name": "[Founder]",
    "sameAs": "linkedin.com/in/…"
  },
  "makesOffer": {
    "@type": "Service",
    "name": "DRIVE™ Adaptability Diagnostic"
  }
}
```

Crawler names as published by each company. robots.txt is advisory — reputable crawlers follow it.

05

PART FIVE

Beyond the website: being named elsewhere

Search engines and AI tools both weigh what other people say about a business. For a young firm, this is where the most ground can be made.

GOOGLE BUSINESS PROFILE

Claim the business listing

The panel beside Google results, and Google Maps. NeuroAIQ can list as a **service-area business** based in Melbourne, without showing a street address. Client reviews collected here are one of the signals Google uses for these results.

BING PLACES

The same, for Microsoft

Bing's equivalent, which feeds Copilot. It can import the Google listing directly, so it's a few minutes' work once the first is done.

BUYER GUIDES

Get into the guides buyers read

Contact the publishers of the 2026 Australian AI consulting guides the team reviewed and ask to be considered. Several are published by firms that include themselves — so a **genuinely useful NeuroAIQ guide to choosing an AI adoption partner**, clearly labelled as ours, is a fair and legitimate option too.

AI DIRECTORY

Keep the government listing current

NeuroAIQ already appears in the Australian Government AI Directory. Its description should match the new site word for word — consistency helps AI tools trust what they read.

LINKEDIN

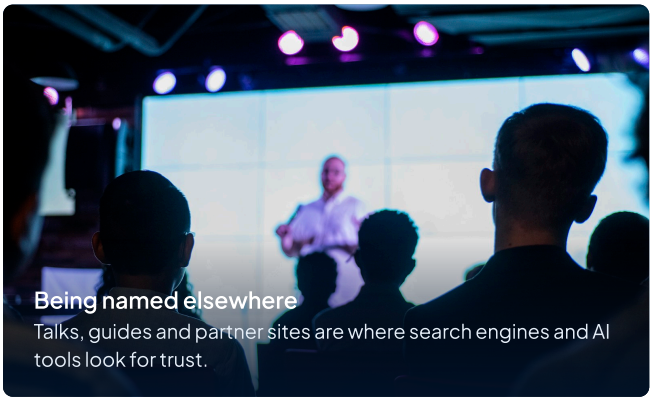

The founder's profile is the biggest asset

Founder-written posts and articles are indexed, shared, and can be cited by AI tools. **A regular rhythm from the founder's own profile** will do more for authority than the company page alone.

PARTNERS AND EVENTS

Turn relationships into links

A link from Sunway University's site, event listings on the platforms people browse, and speaking or podcast appearances — each one is a mention from somewhere that isn't NeuroAIQ, which is exactly what builds authority.

Being named elsewhere
Talks, guides and partner sites are where search engines and AI tools look for trust.

THE STRONGEST MOVE AVAILABLE

If any DRIVE™ findings can be shared — even de-identified and in aggregate — **original data is what journalists, guide writers and AI tools most like to cite.** A short "what we're seeing in AI adoption" piece could earn more links than months of articles.

06

PART SIX · FROM LAUNCH DAY

Measuring what matters

With no Google Analytics on the site today, there's no search or behaviour data to measure progress against. **The first 30 days after launch set the baseline** — which is why this goes in on day one, not later.

GOOGLE ANALYTICS 4

What visitors do

Where they came from, what they read, and whether they enquired. Installed through Google Tag Manager.

SEARCH CONSOLE

How Google sees the site

The searches people used, how often the site appeared, and anything Google can't read.

BING WEBMASTER TOOLS

The same, for Bing

Covers Bing, Copilot and the engines built on them. Imports from Search Console.

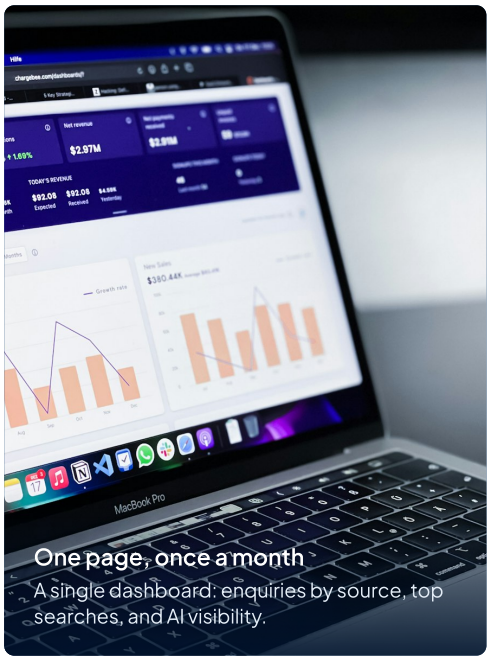

HUBSPOT

What happens next

Each enquiry, where it came from, and whether it became a conversation.

The actions we'd track as key events in Google Analytics — the moments that tell us the site is doing its job:

KEY EVENT	WHY IT MATTERS
Enquiry submitted	The main measure of the site working
Conversation booked	The strongest sign of intent
Self-Check completed	Early interest, and a lead to follow up
Email or phone clicked	Enquiries that skip the form
Newsletter sign-up	Someone who wants to hear more

One page, once a month

A single dashboard: enquiries by source, top searches, and AI visibility.

What we'd report on each month. Targets are set once the baseline exists, not before — anything else would be a guess.

MEASURE	WHAT IT TELLS US	DIRECTION WE WANT
Qualified enquiries	Whether the site is generating leads — the point of all of it	Up, month on month
Searches from new people	Searches not including "NeuroAIQ" — people finding it for the first time	A growing share
Pages in Google's index	Whether the foundations are working	Every key page, within four weeks
AI assistant mentions	How many of the monthly questions name NeuroAIQ	Rising over six months
Speed on mobile	Core Web Vitals	"Good" on every page

Analytics should be disclosed in the site's privacy policy — covered in the security plan, Step 5.

07

PART SEVEN · ONLY IF NEUROAIQ IS COMFORTABLE WITH IT

Paid advertising — where it'd genuinely help

Search takes months to build. Advertising works from day one but stops the day spending does. Used carefully, it fills the gap while the rest of this plan matures — and it answers a useful question fast: **which message brings in the right enquiries.**

START HERE

Google Search ads

Best for: catching people already searching for an AI adoption assessment or help.

The catch: niche searches mean small volumes — but the people searching are close to ready.

THEN

LinkedIn ads

Best for: reaching exact roles — CEOs, founders, heads of transformation, HR leaders — by company size and industry.

The catch: typically the most expensive per click, and it needs a strong offer. The Self-Check is that offer.

ONCE THERE'S TRAFFIC

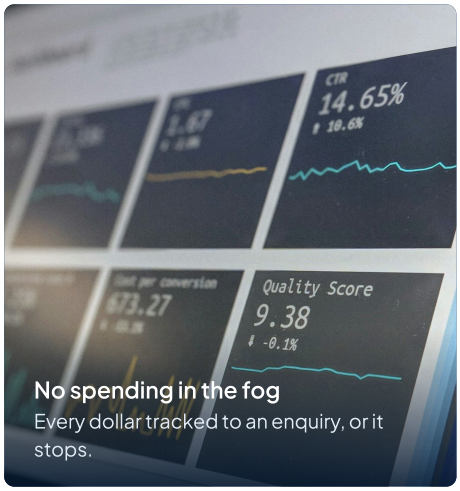

Meta — Facebook and Instagram

Best for: owner-operators of smaller businesses, promoting events, and reminding past visitors to come back.

The catch: weaker at targeting by job title, so it works best on people who've already visited.

Why Meta earns its place. NeuroAIQ's main market is small and medium organisations, where the buyer is often the owner, spending their own money. Meta reaches those owners at a fraction of LinkedIn's cost — and it's one of the cheapest ways to **stay in front of people who visited the site but didn't enquire.**

LinkedIn's Thought Leader Ads let NeuroAIQ promote the founder's own posts to a chosen audience. They appear as the founder's own post, marked as promoted — a person sharing expertise, which suits a firm selling trust.

No spending in the fog
Every dollar tracked to an enquiry, or it stops.

CHANNEL	SUGGESTED TEST	JUDGED ON
Google Search	$1,000–$1,500 a month	Cost per qualified enquiry, over six weeks
LinkedIn	$2,000–$3,000 a month	Self-Check completions and booked conversations
Meta	$500–$1,000 a month	Return visits and event sign-ups

GROUND RULES

One channel at a time, a fixed budget agreed first, and a stop point decided before starting. Advertising pixels go in through Tag Manager so they can be switched off in one step, **no enquiry details are ever passed to an ad platform**, and the privacy policy is updated before anything goes live.

Budgets are indicative, in AUD excluding GST, and would be confirmed with NeuroAIQ before any spend.

8 The first six months

Search results build gradually — **expect the first real movement between months three and six**, faster for NeuroAIQ's own name and slower for broader questions.

MONTH 1 · LAUNCH

Foundations

- Titles and descriptions
- One SEO tool, one sitemap
- Analytics, Search Console, Bing
- Redirects and structured data
- Business profiles claimed

MONTH 2

Relevance

- DRIVE™ and three-weeks pages
- First two problem pages
- Founder page
- LinkedIn rhythm begins
- First AI visibility check

MONTH 3

Authority

- Buyer-guide outreach
- Partner and event links
- Directory descriptions aligned
- Google Ads test, if approved
- First monthly report

MONTHS 4 TO 6

Build on what works

- Two articles a month
- Remaining problem pages
- LinkedIn test, if approved
- Meta reminders, if approved
- Targets set from real data

9 What we need from you

Genuine gaps rather than assumptions we've chosen not to make. **Questions 1 to 3 are needed before launch.**

#	QUESTION	WHY IT MATTERS
1	What's the final list of pages and addresses for the rebuilt site?	Titles and redirects depend on it
2	Are Google Analytics or Search Console already set up under a NeuroAIQ Google account?	Keeps any history in one place
3	Is HubSpot the intended home for website enquiries, and who owns the account?	Needed to trace leads to source
4	Can any client outcomes or DRIVE™ findings be published, even de-identified?	The strongest evidence available
5	Is NeuroAIQ comfortable with paid advertising — and on which channels?	Decides whether Part 7 goes ahead
6	Should AI training crawlers be allowed, or only the search ones?	A business choice, not a technical one
7	Who continues the content and reporting after Team B58 finishes on 9 October?	Months 2 to 6 need an owner

THE POINT OF ALL OF IT

The expertise is already there. This plan makes sure the people looking for it can find it.

NeuroAIQ
The Neuroscience of AI Adoption
